## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-43 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding independent claim 1, the prior art fails to disclose or make obvious a spectrometer comprising an ion mobility spectrometer device comprising:

a mobility section,  
means for maintaining a collision gas within the mobility section,  
an ion focusing section for receiving ions from the ion mobility section, and  
including an RF ion guide and means for supplying an RF voltage to generate a field to promote focusing of ions along the axis of the RF ion guide and at least one mass analysis section, that receives ions from the RF ion guide wherein the ion mobility section is one of upstream from and integral with the ion focusing section.

Claims 2-15 are allowed by virtue of their dependency on claim 1.

Regarding independent claim 16, the prior art fails to disclose or make obvious a method of separating ions based on ion mobility characteristics, the method comprising: providing at least one drift region and providing and maintaining a collision gas in the drift region, forming a DC potential gradient along the drift region to drive ions through

the drift region, passing the ions through an RF ion guide and maintaining gas at a pressure in the RF guide sufficient to focus the ions along an axis of the RF ion guide and passing ions into a mass analyzer.

Claims 17-28 are allowed by virtue of their dependency on claim 16.

Regarding independent claim 29, the prior art fails to disclose or make obvious an ion mobility spectrometer device comprising a drift region, means for forming a DC field gradient along the drift region, means for maintaining a collision gas pressure within the drift region, a collision cell connected to the ion mobility spectrometer for receiving ions therefrom, and an RF ion guide and means for supplying an RF voltage to generate a field to promote focusing of ions along the axis of the RF ion guide and a final mass analysis section, that receives ions from the RF ion guide.

Claims 30-32 are allowed by virtue of their dependency on claim 29.

Regarding independent claim 33, the prior art fails to disclose or make obvious a method for separating ions based on ion mobility characteristics, the method comprising providing a drift region with a DC field gradient, passing the ions into a collision cell, passing the ions through an RF ion guide and maintaining gas at a pressure in the RF guide sufficient to focus the ions along an axis of the RF ion guide and passing ions into a mass analyzer.

Claims 34-37 are allowed by virtue of their dependency on claim 33.

Claims 38-43 were allowed in the previous office action.

The main feature that separates the apparatus and methods of the current invention apart from prior art is the use of an RF guide to focus ions that have been

separated with an ion mobility spectrometer and guide them into a mass analyzer. The prior art teaches using RF ion guides between stages of tandem mass spectrometers and teaches the use of electrostatic focusing for interfacing an ion mobility spectrometer to a mass spectrometer. However, the prior art teaches away from using an RF ion guide between an IMS and a mass spectrometer.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance"
